PAGE 1 — YOUR SCRIPT (What You Say)

Opening — 30 seconds:

Hi [Name], I'm Mihle from VVU in Gqeberha. I'm building a tool for fuel reconciliation. Before I build anything, I'm trying to understand what the current process costs. I'm not selling today — just 3 questions, 5 minutes. Is now okay?

If they say yes:

Thanks. I'm recording this as a verifiable observation — same method we use for fuel and mineral ledgers — canonical 11-field + SHA-256, so I don't interpolate. Missing data flagged [UNDEFINED].

If they say no / busy:

No problem. When is better? Or who owns reconciliation cost? (Get owner name). Don't push. Leave one-pager.

Body — keep in scope:

- Say: fuel reconciliation, monthly close, sign-off cost. Do NOT say: SMR, HTGR, mineral refinery, bio-leaching, water isotopes, nuclear safeguards, Ubuntu sovereignty narrative, AI agents, protocol licensing. Those are gated behind Fact #1.
- If they start talking about diesel theft, losses, etc: listen, but bring back to Q1 — cost of reconciliation sign-off, not cost of theft.
- If they ask what you're building: 'Small R1,671 kit that logs litres in/out with tamper-evident record — same ledger we use for minerals, but fuel first. Zero-fee 5-day trial, pay only if we find >R1k discrepancy.'

Gate for YOU: Do not mention price R5,000 or R19,500/month today. Do not mention minerals.
Do not build kit #2 until PASS.

PAGE 2 — QUESTIONS (What You Ask)

Q1 — The Number (falsifiable):

"When you close the month, what does reconciliation sign-off cost — staff hours plus external audit?"

- Probe: How many hours? Who? Hourly rate? External auditor fee? Software license?
- If they hesitate: 'Even a range — R10k, R20k, R50k? Is it more than R20k/month?'
- Record immediately: cost = R___ and tier.

Q2 — The Owner (who believes the number):

"Who owns that number if it isn't you?"

- Get name + role. Is it Finance, CFO, Operations Manager, external auditor? This is your next contact.
- If they say 'we all own it' → push: 'Who signs off finally?'

Q3 — The Failure Mode (what happens when it doesn't tie):

"What happens today when it doesn't tie out?"

- Probe: Who gets called at night? How long to resolve? What is cost of unresolved? Do you write it off?
- This tells you urgency, not price.

Tier Assignment — in the moment:

- T1 — They SHOW you invoice/contract. Sighted. Photo if allowed (redact sensitive).
- T2 — They TELL you named figure + named owner. Eg: 'R35k, J. Smith Finance owns it.'
- T3 — They say 'maybe R20k?' No owner, estimate.
- T4 — 'I don't know' / 'We don't track' — no number.

Write down verbatim: [date] [depot] [role] monthly reconciliation cost = R___
[T1/T2/T3/T4] owner = [name]

PAGE 3 — ANSWERS & HANDLING (What You Do With Their Answers)

If they give you T1 + >R20k:

This is PASS. Say: 'Thank you. This is exactly what I needed — a sighted number over R20k. Can I come back next week with a small kit for a zero-fee 5-day test? You only pay if we find >R1k discrepancy.' Get next appointment. Record contentHash.

If they give you T2 + >R20k:

This is also PASS. Same as T1. T2 with named owner is enough to build kit #1. Ask: 'Can I verify with [owner name] for 5 minutes? I want to make sure I have the right number before building.'

If they give you T2 + R10k-R20k:

CONDITIONAL. Say: 'Thank you. To make this work at R10-20k, I need to rework the price. Can I come back with a revised offer if I can make it cheaper than current process?' Do NOT build kit yet.

If they give you T3 or T4 or <R10k:

FAIL. Say: 'Thank you — this helps me avoid building something you don't need. If you know another depot where reconciliation costs more, who should I talk to?' Pivot vertical. Do NOT build kit.

Common traps — how to stay in scope:

- They ask about SMR/minerals: 'That's phase 3. Today only fuel. Fuel funds minerals, but I can't build minerals until fuel PASS.'
- They ask about AI: 'Read-only anomaly detection. No write path to pumps. Same ledger, but fuel first.'
- They ask price: 'Zero-fee 5-day trial first. If we find >R1k discrepancy, R5,000 pilot. But only if you have PASS. Today I only need your cost number.'
- They want proposal: 'I will send you verifiable receipt of what you told me — canonical + SHA-256 — so you can check I didn't interpolate. No proposal until kit #1 ready.'

After visit: run depot_observation.py with date/depot/role/cost/tier/owner → get contentHash + receiptHash + gate. This is your evidence. Do not build kit #2 until PASS.
