# Fuel Reconciliation — 3 Questions (5 Minutes)

I'm Mihle from VVU. I'm building a tool for fuel reconciliation and trying to understand what the current process costs before I build anything. I'm not selling anything today.

**What I need from you:**

- Q1: When you close the month, what does reconciliation sign-off cost — staff hours plus external audit? (Even a rough number helps)
- Q2: Who owns that number if it isn't you? (Name / role)
- Q3: What happens today when it doesn't tie out? (Who gets called, how long to resolve?)

---

**What happens next:**

- I write down your number as: [date] [depot] [role] cost = R___ [T1/T2/T3/T4] owner = [name]
- T1 = I see invoice/contract, T2 = you give me named figure + owner, T3 = estimate, T4 = no number
- If cost > R20k with T1/T2, I will build a small R1,671 kit to test. Zero-fee 5-day trial. You only pay if we find discrepancy > R1,000.
- If cost < R10k or T4, I will not build anything. I pivot.

I will NOT ask about SMRs, minerals, water, nuclear, or sovereignty today. Only fuel reconciliation cost. 5 minutes.

Thank you for the 5 minutes. This helps me avoid building something nobody needs.
